

FENTANYL FACTS

"Fentanyl is the single deadliest drug threat our nation has ever encountered. Fentanyl is everywhere. From large metropolitan areas to rural America, no community is safe from this poison. We must take every opportunity to spread the word to prevent fentanyl-related overdose death and poisonings from claiming scores of American lives every day."
- DEA Administrator Anne Milgram

- Fentanyl is a potent synthetic opioid that can be prescribed by a doctor.
- COUNTERFEIT fentanyl is often pressed to look like a prescription pill but there is no way of knowing the exact dosage in each pill.
- Fentanyl is 50-100x stronger than morphine or heroin. 2mg of fentanyl is a lethal dose for most.
- It may be possible to reverse a fentanyl overdose with Narcan (naloxone).

For more information and resources on fentanyl or Narcan please contact:
